

Digital Literacy Project Report

Title Page

Name: Riya Sinha

Reg No.: 25BOE10080

Branch: Bio Engineering

Year: 1st Year

Course Code: CSE0001

Course Title: Digital Literacy

Date: 29-03-2026

Introduction (100–150 words)

In today's digital world, having basic digital literacy skills is essential for students. This project helped me understand how to use different online platforms responsibly and professionally. As a Student Digital Ambassador, the aim of this project was to explore tools that improve communication, online presence, and awareness of cyber safety.

Through five different tasks, I learned how to create digital content, build a professional profile, practice coding, communicate through emails, and understand cybercrime risks. Each task gave me practical experience using real platforms like GitHub, HackerRank, and Google Forms. Overall, this project improved my confidence in using digital tools and understanding their importance in academic and professional life.

Task 1 – Infographic Write-up (150–200 words)

For this task, I created a digital literacy awareness infographic using Canva. Canva is an easy-to-use online design tool that provides templates and visual elements. My infographic included key topics such as the meaning of digital literacy, safe internet practices, and the importance of maintaining a professional online presence.

I designed the infographic in a simple and visually appealing way so that it can be easily understood by students. I used icons, short text, and colors to highlight important points like online safety and responsible usage of digital tools.

While creating the design, I found it interesting to explore different templates and layouts. However, choosing the right combination of content and design was slightly challenging because I wanted to keep it informative but not too crowded.

This task helped me understand how visual communication can be used to spread awareness effectively.

Task 2 – Digital Portfolio Write-up (150–200 words)

In this task, I created my digital portfolio using platforms like GitHub, Kaggle, and Stack Overflow. These platforms are widely used by students and professionals for coding, collaboration, and knowledge sharing.

GitHub is mainly used for storing and managing projects. I created a profile and learned how to organize files in repositories. Kaggle is useful for data science and learning datasets, while Stack Overflow helps in solving programming-related doubts by interacting with a global community.

Setting up these profiles helped me understand the importance of having a professional online presence. Over the next four years, I plan to regularly update my GitHub with projects, use Kaggle to learn data-related skills, and use Stack Overflow to improve my problem-solving ability.

This task made me realize that building a digital portfolio early can be very helpful for internships and future job opportunities.

Task 3 – Platforms Write-up (150–200 words)

For this task, I explored both a coding platform and a collaboration tool. I used HackerRank to practise coding and completed a beginner-level challenge called “Solve Me First”. This task helped me understand how coding problems are structured and how to write basic programs using inputs and outputs.

Along with this, I created a Google Form titled “Digital Literacy Awareness Quiz” to test basic knowledge of online safety and digital tools. The form included five questions covering topics such as digital literacy, strong passwords, phishing, and coding platforms. After sharing the form, I was able to view responses in Google Sheets, which helped me understand how data is collected and analyzed.

This task was very useful because it showed how different digital platforms serve different purposes. HackerRank helps in improving problem-solving and coding skills, while Google Forms and Sheets are helpful for creating surveys, collecting responses, and organizing data.

Overall, these tools will be very useful in my academic journey for practising coding, conducting quizzes, and managing information efficiently.

Task 4 – Email Etiquette Write-up (100–150 words)

In this task, I wrote two professional emails and created a checklist for responsible social media usage. I learned that a good email should have a clear subject, proper greeting, polite tone, and a structured body.

A common situation where poor digital communication can cause problems is when a student sends an email to a professor without a subject line or uses informal language like “Hey” or “Send me notes.” This can create a negative impression and may lead to the message being ignored.

Such situations can be avoided by writing clear subject lines, using formal greetings, and maintaining a respectful tone. After this task, I understand the importance of professional communication and will ensure that my emails are clear, polite, and well-structured.

Task 5 – Cybercrime Write-up (100–150 words)

While working on this task, I learned about cybercrimes like phishing and online fraud. What surprised me the most was how easily people can be tricked into sharing personal information through fake messages or links.

I realized that many cyber attacks happen due to a lack of awareness. Simple mistakes like clicking unknown links or sharing OTPs can lead to serious problems.

After completing this task, one habit I will change is being more careful while using the internet. I will avoid clicking suspicious links and always verify sources before sharing any personal information.

This task increased my awareness of online safety and made me more responsible as a digital user.

Conclusion (100 words)

This project helped me gain practical knowledge about digital tools and online safety. I learned how to create content, build a portfolio, solve coding problems, and communicate professionally. Each task was useful in developing important digital skills.

Overall, this project made me more confident in using technology in a responsible and productive way. These skills will not only help me in my academics but also in my future career.
